REPORT

OF THE

House Committee of the Asylum.

The number of patients in the Asylum on the 14th May last was 448, as against 437 at the corresponding date of last year, showing an increase of 11.

The late extensions and some few judicious arrangements in the House have materially relieved the pressure for room, and spare accommodation is now available.

Should the contemplated erection of recreation hall and dining-room be determined upon, a very considerable space will be set free for the accommodation of additional patients. The Commissioners in Lunacy, in their late inspections of the House, have been urgent, as will be seen from their reports, in advising the necessity of these extensions; and your Committee are hopeful that they will be able to recommend the Board to proceed with the work.

The Accounts show a balance for the past year of £1557 15s. 7d., as against £1939 10s. 9d. the year previous. As foreshadowed in last year's report, the result of last year's operations is less favourable, owing to pretty large payments that have fallen to be placed against revenue in respect to renewals of the drying closets, &c., and it would have been still more so but for the enhanced value of the Furniture, &c., which has been recently appraised by a professional valuator, and has added about £300 to the amount at which the Furniture stood in the books.

The outstanding Boards are, as usual, trifling, only amounting to £71 9s. 6d., and are mostly recoverable.

The new Stores and Offices are now almost completed, and are to contribute largely to the convenience and order of the Establishment.

The amount paid up to date to account of new works is a little above £3000.

The sums expended for maintaining the existing fabric are in excess of last year, being £378 for Timber, Glazing, and Painting; £106 for Mason, Plasterer, and Slater Work; £195 for Furniture and Carpeting; £143 for Bedding and Napery; and £613 for Blacksmith and Plumber Work.

A very considerable increase in the cost per head of the population has occurred in the following items, caused partly by the large outlays

ment, and partly by the increasing proportion of private patients to paupers, viz;—Plumber, Blacksmith, and Foundry Work; Timber and Glazing, Mason and Plasterer Work, Furniture and Carpeting, Gas and Candles, Crystal, China and Stoneware, Hardware and Ironmongery, Stationery and Printing, Oatmeal, Butcher Meat, and Small Groceries. On the other hand, a decrease in the cost has taken place in the following:—Pease, Barley, and Rice; Fish and Salt, Tea and Coffee, Beer and Porter, Wine and Spirits, Fruit, Potatoes, and Vegetables; Wages, Coals, Bedding, Napery, and Rents.

The Farm and Garden are maintained in their usual high state of culture, and show a favourable result. The very important item of milk—upwards of 12,000 gallons—contributes much to the health and well-being of the patients.

During the year the House has been twice inspected, once by the late Sir James Coxe and once by Dr Mitchell, Commissioner of Lunacy, whose reports will, as usual, be produced in the annual printed statement.

An agreement has at length been entered into with the District Board of the County of Forfar, by which your Asylum is ensured in a half share with the Dundee Asylum of all the pauper patients of the County.

Though the lease of the old Asylum to the War Office is not yet signed, the terms of it are now virtually adjusted, and the whole matter should now be completed within a very short time.

The Committee have had under their consideration, and are now in course of executing, an important, though comparatively inexpensive, improvement upon the existing system of House Drainage. The main features of this alteration are the immediate conduct of the sewage to outside drains by means of vertical iron pipes, which at once expose it to the influence of atmospheric air; the removal of the sewage to the farm by gravitation instead of by pumping, and the abolition of cesspools. These changes the Committee need not say are of the utmost importance to the sanitary condition of the Asylum.

Your Committee have pleasure in recording their entire confidence in Dr Howden and his staff, whose humane and enlightened treatment of the inmates, by the gradual removal of all unnecessary restraints, invests the system pursued with special interest.

The thanks of the Board are due to the musical and other associations in Montrose for entertainments during the winter months.

F. B. PATON, Convener.

Montrose, June 11, 1878.

REPORTS

OF

The Commissioners in Lunacy,

ON THE

MONTROSE ROYAL ASYLUM.

Montrose Royal Asylum, 11th July, 1877.

The following are the changes which have taken place among the patients since the visit of the 23rd January:—

				Priv	ate.	Pau	per.	Total.
				M.	$\vec{\mathbf{F}}$.	M.	F.	
Admissions	***	•16.4		13	7	15	34	69
Discharges,	• • •	• • •	•••	6	4	7	16	33
Deaths,	• • •	• • •		1	1	5	8	15

These figures show an increase of 21 in the numbers resident, which are at present 200 males and 240 females, or 440 in all. ment has yet been concluded with the District Board, and in consequence of the uncertain position in which the Asylum is thus placed, several Aberdeenshire parochial patients have been admitted, and a certain degree of overcrowding produced. On the female side, for instance, six shake-downs are at present in use. On the male side the accommodation is fully occupied, and further admissions from Aberdeenshire must be refused, unless Forfarshire, in the absence of a binding agreement, is to be regarded as having no preferential claims for As noted in last report, a new laundry is being accommodation. erected; and a beginning is about to be made with improved accommodation for the domestic servants and for stores, and at the same time a dormitory for a few of the female working patients will be provided. The erection of the new dining-hall and amusement room is in the meantime postponed, although both patients and attendants suffer not only in comfort but in health from the present restricted accommodation. The crowding during amusements is felt to undo much of the good which would otherwise be experienced, and the superior officers themselves feel their health affected by the impure atmosphere which they are forced to It is, therefore, extremely desirable that no further delay should take place in placing the Asylum in a position to proceed with energy to remedy recognised defects.

Of the patients discharged 23 had recovered. The mortality has been moderate, and the deaths have taken place to a considerable extent among the old residenters. Of those who died only 4 were admitted in 1876 and 1877. The causes of death were phthisis in 3 cases, other forms of pulmonary disease in 5, and various forms of organic degeneration in the remaining 7. The average age at death was 51 years.

The present sanitary condition of the inmates is satisfactory. No patient is confined to bed, but the community includes a considerable number of feeble and broken-down persons requiring constant care. The numbers raised by the night attendants are 29 males and 25 females, but the number of wet beds has been much reduced by improved night service, now rarely exceeding 4 or 6 on each side.

The House was in excellent order. Papering and painting are being steadily extended, and the wards generally present a very comfortable and cheerful appearance. The extent to which flowers are introduced into the galleries is a very marked feature in the decorations.

The patients of both sexes were entirely free from excitement. Seclusion has been exceptionally used in two cases since last visit, in the one to guard against the violence of an epileptic, and in the o'her from the momentary occupation of the attendants in house cleaning. The strait-jacket was applied in one case for surgical reasons.

The numbers registered as industrially employed are 110 males and 125 females. Of the former 86 are at work in the grounds, and of the latter 8. Few changes have taken place among the attendants, a result which is attributed in no small degree to their increased remuneration, although probably also to some extent due to the decrease of migration, and to the greater difficulty of obtaining employment in other walks of life. Of the present male attendants, 18 in number, 8 were formerly farm servants, 5 were shoemakers, 3 soldiers, one was a carter, and one Their wages begin at £30, but at present only 3 are at the minimum rate. Of the female attendants 4 were formerly powerloom workers, 6 domestic servants, 2 millworkers, 2 patients, one was a farmer's daughter, and one a dressmaker. The wages begin at £14, and at present 3 are at the minimum rate. The females are also provided with a uniform. The attendants of both sexes are very favourably spoken of. The inquiries made as to the dietary were satisfactorily answered. The supply of vegetables is very full and varied.

In the medical treatment of the patients the drugs principally used appear to be bromide of potassium and hydrate of chloral. For a considerable time three-patients have been getting drachm doses every

night of the chloral, with beneficial result both as regards sleep and their general mental condition.

Thirty males and 34 females have the full privilege of parole to go out as they please. No change has yet been made in the airing-courts, and probably the removal of the walls will not be undertaken, at any rate until the building operations have been completed. Periodicals continue to be fully supplied, and in other ways the amusement and recreation of the inmates receive proper consideration.

The bedding and day clothing were clean and in good order, but the appearance of the bedding and of the day clothing of some of the men is capable of improvement.

The want of uniformity in the bedsteads and the varying material used for the mattresses—hair, chaff, and straw—produce an unpleasing effect, although in essentials there is nothing to complain of. The condition of Gayfield House was entirely satisfactory.

The various registers are carefully kept.

(Signed) JAMES COXE,

Commissioner in Lunacy.

Montrose Royal Asylum, 18th and 19th January, 1878.

The present population consists of 196 men and 236 women. The following figures show how many of the inmates are private patients, and how many are paupers:—

			\mathbf{M}_{\star}		Total.)	
Private Patients,		,	 43	34	77 }	432
Pauper Patients,	• • •		 153	202	355	

Of the paupers, 215 are chargeable to the parishes of Forfarshire, 32 being chargeable to Dundee parish, and 1 to the parish of Liff and Benvie.

The changes which have taken place since the date of last visit are as follows:—

		I.	Private I	Patients.	Pau	pers.	
			M.	F.	M.	F.	Total.
Admissions,	• • •	•••	14	12	23	21	70
Discharges,		• • •	7	6	26	19	58
Deaths,		• • •	1	3.	9	7	20

Of the 58 patients discharged, 33 left the Asylum as recovered, and 12 were transferred to other Asylums.

The rate of mortality has been high, and there has of late been more

sickness than usual in the Asylum. The chief causes of death were phthisis, heart disease, cancer, Bright's disease, and senile decay, but two of the deaths were caused by erysipelas. This disease appeared in the establishment in August last, and since that time 12 patients have been attacked by it. During the 21 months before August, no case of erysipelas had occurred among the patients. All the 12 cases, which have occurred during the past season, may be described as idiopathic. In no instance has the disease appeared in connection with a wound or broken surface. Nor has it presented itself with special frequency in any particular part of the building, though in the earlier months more women than men suffered from it. Indeed, no female patient has been attacked since December, and no man was attacked till November, Taken as a whole, the cases have been spread over the six months, and they have followed each other at intervals, which were sometimes considerable. The epidemic, if it may be so called, can scarcely yet be regarded as subsiding, since two patients are at present labouring under the disease. All efforts to explain its appearance and prevalence have been unsuccessful, and nothing has been observed which seemed to indicate that it affects one part of the building more than another, or that it has been spreading through contagion. Nevertheless, it would perhaps be well to isolate any patients who may hereafter be attacked, and to wash their clothing separately.

It appears that during the last 13 years, 44 cases of erysipelas in all have occurred in the Asylum. In some years no case occurred, and the number in one year seldom rose above two or three. But in the year ending 31st May, 1870, eight cases, and in that ending 31st May, 1874, five cases, occurred.

There is no evidence that the drainage is at present defective, or that it was so during the two years just referred to; and the change in the system of drainage which is at present under consideration is not with the view of remedying any defects which would be injurious to health, but with the view of turning the drainage to better account as liquid manure. If effect, however, is given to this change, the result will certainly be a better guarantee of good health, and the scheme is therefore recommended by a twofold consideration.

One accident, which did not prove serious in its results, is recorded. There is no entry in the Register of restraint and seclusion.

Few changes have taken place among the attendants. In no instance was an attendant dismissed for bad conduct. The majority of those who left did so either in order to get married or to fill more remunerative positions, or because they were required at home. The actual

staff of attendants is made up of persons having a sensible, healthy, and comely appearance, and they are said to discharge their duties in a satisfactory manner.

Considerable progress has been made with the structural changes. The laundry arrangements are almost completed, and they leave nothing to be desired. The new accommodation for the house servants, and for some of the patients working in the laundry, will be ready for occupation in a few months, and will constitute a valuable addition to the Asylum. The new store, which is also approaching completion, has not yet been fitted up internally, and it is hoped that careful consideration will be given to the subject before the plan of these fittings is resolved on. Various other structural changes of a minor, but still of a practically important, character are being carried out, or are in contemplation.

As regards the amusement and dining hall, nothing has yet been done; but it is earnestly hoped that the building of these will be commenced with as little delay as possible. This addition to the Asylum is needed, in order to maintain for it the prominent position it has hitherto occupied. In the meantime the patients lose advantages which they have elsewhere, and which are universally accepted as of great practical value. Apart altogether from the nature of any agreement which may be made with the Forfarshire District Board, the erection of a dining and amusement hall should be regarded as a necessity. Fortunately, the erection of it will set free portions of the existing buildings, which, besides furnishing excellent workshops and shoerooms, will also add very considerably to the accommodation—probably enabling the Asylum to receive from 40 to 60 additional patients.

Many of the doors are now opened without a key, the locks being supplied with handles. In this, and in various other ways, restrictions on liberty, which in this Asylum were always few, are being steadily reduced. On both sides of the house two wards can be entered or left without a key, and to obtain access to the other ward no key is needed. In several of the dormitories, too, the locks are furnished with handles which give ingress or egress, and the doors of those others which still have special locks, are only actually locked during the day.

It is intended to begin at once to take down the walls of both airing courts, commencing with the walls which look to the south. It is possible that the courts may be brought under cultivation as vegetable gardens; but this point is still under consideration. In the meantime, however, it has been definitely resolved on to increase considerably the extent of the pleasure grounds in front of the Asylum, and to devote

them entirely to the relaxation of the patients. In order to obtain greater privacy, and also to give shelter, a broad belting of trees is being planted on the west side of the grounds from the Gate Lodge to the south boundary hedge.

The agreement with the District Lunacy Board is not yet formally concluded, though its terms are understood to be finally settled. It is difficult to see how in practice these can be implemented, and it is feared that fresh misunderstandings between the Directors of the Asylum and the District Lunacy Board will soon arise.

Some changes have been made among the higher officers of the staff. The Steward, who had been for about thirty years connected with the Asylum, has been pensioned, and the Housekeeper has left. A new Steward has been appointed, who acts also as clerk; and the duties of Head Attendant and Housekeeper are now combined and discharged by Miss Burness.

The indoor amusements consist of dances, concerts, theatrical performances, lectures, card parties, billiards, &c., and the outdoor amusements of picnics, croquet, archery, curling, cricket, &c. These things, however, are always regarded as secondary in importance to the steady engagement of the patients in useful work, which is made as varied and interesting in its character as possible.

The farm continues to be managed profitably. All the milk for the Asylum is supplied by it. The average daily quantity during September was 271 pints; during October, 237 pints; during November, 227 pints; during December, 200 pints; and during January, up to the date of this entry, 189 pints. The highest supply on any one day during the year 1877 was 393 pints, and the lowest 176. The average number of patients taking porridge was 117 men and 68 women.

All parts of the House were found in excellent order, and presented a cheerful and comfortable aspect. The usual tranquility prevailed among the patients, who were entirely free from complaint.

The Books and Registers were examined and found to be correctly kept. It was suggested that the new Register of Discharges should be replaced by one of a better and more substantial character, and that the Register of Deaths should be re-bound.

(Signed) ARTHUR MITCHELL,

Commissioner in Lunacy.

On 14th May, 1877, the number of inmates was 437, of whom 86 were private patients and 351 paupers. At the corresponding date this year the total number is 448, of whom 105 are private and 343 paupers, so that there is an increase of 19 private and a decrease of 8 pauper patients. This difference in the proportion of self-supporting and rate-supported patients is more marked in the Admissions. In 1876-77 the private admissions were 24, this year they were 54, while 100 paupers were admitted last year and only 78 this year. The total number under treatment during the year was 569, of whom 54 have been discharged recovered, 12 as relieved, 22 as not improved, and 33 died. The average number daily resident during the year was 441, being 13 more than in the previous year.

ADMISSIONS.

The increase in the number of private, and the decrease of pauper admissions noticeable in the statistics of this Asylum for some years, while to a certain extent explained by the increasing number of high-class patients, is due mainly to the increased proportion of patients at the lower rates of board. Whether this is an indication of greater

wealth among the working classes, or of greater stringency on the part of Parochial Boards it is difficult to say, but it is worthy of remark that, while in most districts pauper lunacy has increased since the introduction of the Government Grant in aid, it seems to have decreased in the landward parts of Forfarshire. The very low rate of our minimum charge for private patients, 9s. 7d. a week, no doubt induces many to strive to maintain their relatives independent of parochial aid who could not to do so were the rate as high as it is in most chartered and district Asylums. Of the 78 paupers admitted, 40 were chargeable to Forfarshire, 14 to Kincardine, 14 to Caithness, and 4 to Shetland, and 6 to other counties. In 91 of those admitted, recovery was considered possible, and in 41 impossible; 54 were in good, 42 in indifferent, and 36 in bad bodily health.

Six were under 20 years of age, fourteen between 60 and 70, and nine between 70 and 90.

The increasing tendency to use Asylums for the care of the aged and infirm who are but slightly affected mentally, while explaining to some extent the apparent increase of insanity, has a considerable influence on Asylum statistics. The death rate is increased, and the ratio of recoveries is diminished. If, however, the community for whose convenience the Institution exists derives a benefit by having its infirm members better nursed, even though it be on a death bed, I do not imagine it would be consistent with the benevolent intentions of the founders of this Asylum were I to reject applicants for admission when there is accommodation, merely because they were incurable or likely soon to die.

Statistics of themselves cannot show the usefulness and efficiency of an Asylum; indeed these qualities are quite consistent, and may co-exist with a low percentage of recoveries and a high death rate.

DISCHARGES.

The ratio of recoveries to the total admission was 41 per cent., and if we deduct the totally incurable from the admissions, the ratio on the remainder is 59 per cent.

Four recovered within a month of admission, 43 within twelve months, while 11 had resided more than a year. One recovery after a residence of eleven years was the case of chronic mania, M. A., alluded to in last year's report, who, after ten years' almost total suspension of rational thought or action, rose from bed one morning apparently quite sane, and continued so.

The large proportion of recoveries within twelve months of admission shows, what might be expected, that the chance of recovery is greater

in recent cases. There is, however, no warrant for the conclusion often drawn from this fact, that the earlier a person becoming insanc is placed in an Asylum, the more likely is he to recover. It may be so, and as he is likely to be more skillfully treated, it probably is so; but statistically we can have absolutely no proof, for the evident reason that we know nothing of the proportion of recoveries of those who are not placed in Asylums.

It will be observed from Table XIV. that only one patient who had recovered was lighter on discharge than on admission, and that with few exceptions there was a marked increase in weight, coincident with improved general and mental health.

MORTALITY.

The death rate may be considered low, being 7.48 on the average number daily resident, and 5 per cent. on the total number treated.

The mortality of the respective sexes was more consistent with general experience than it has been for some years, the percentage among the men being twice as great as among the women.

Five died within a month of admission, 2 of these being moribund when admitted.

Two had been inmates for the long period of 39 years.

More than half of the deaths occurred in November, December, and January; and one-half of those who died were between 60 and 90 years of age.

It will be seen from Table XIII. that all the deaths from cerebral and spinal diseases occurred in men, while all those dying from abdominal diseases were women.

The only preventable cause of death which calls for special remark is erysipelas, of which three patients died.

It will be seen in Table XVI., which records the occurrence of every case of illness in each month, along with the meteorological conditions, that there were 13 cases of erysipelas, the first making its appearance in August and the last in January. They were all of an idiopathic nature, and though there were numerous instances of cuts and open wounds in the House at the time, in no case did the erysipelas affect these. The disease generally made its appearance first in the tip of the nose, whence it spread over the head, face, and neck. I failed to trace its connection with special meteorological conditions, or with an insanitary condition of any particular part of the House, as the cases broke out sporadically, first in one place and then in another, without any apparent connection.

NEW BUILDINGS.

The completion of the new washing-house, laundry, and stores marks an important era in the history of the Institution.

These departments, originally deficient, had become quite unfit to meet the wants of the Asylum in its present dimensions. Economically, the new buildings had become a necessity, but they must also be considered as a valuable addition to our curative agents. No one who has seen the new washing-house on a Monday morning, with its five and twenty tubs in full operation, can doubt the benefit the patients are deriving from the healthy employment.

The curative effect of work is greatly influenced by the nature of the place where it is carried on, and there is all the difference in this respect between a crowded, wet, dirty, ill-lighted, ill-ventilated washing-house and a large, airy, cheerful one, such as we now possess; just as there is between the benefit of oakum-picking in a dull, dingy room, such as might have been seen 20 years ago in the old Asylum, and the inspiriting, health-giving work on the harvest field at the farm at Sunnyside. Everything about an Asylum is to some extent a curative agent, and serves this end in proportion to its general efficiency. Structural improvements, therefore, while they may add little or nothing to the accommodation for the lodgement of patients, may vastly increase its remedial resources.

The additions still in contemplation include, as you are aware, a new kitchen and scullery, a dining hall, and a recreation hall. The parts of the existing building set free by the occupation of the new stores would be the site of the new kitchen and scullery, which can be completed before those now in use are interfered with for the erection of the dining and recreation halls. It may be satisfactory to know that, though these changes imply considerable expenditure, they will in the long run prove financially remunerative by setting free other parts of the building which may accommodate 60 or 70 additional patients, besides supplying excellent shoe and dressing-rooms in the basement for the outworking patients, and other conveniences which are much required.

As a temporary residence for private patients, a furnished house has been rented at Edzell for a few months in summer and autumn, and is already in occupation. It is believed that the change of scene will prove highly advantageous to a number of patients who will be sent to it.

CHANGES IN GENERAL ARRANGEMENTS.

Various changes in the general arrangements have been made during the year. Amongst them may be noted the removal of the airing court walls and the application of ordinary handles to the doors, so that ingress or egress may be had to and from several of the wards without the use of keys. It would be premature to advocate these changes as improvements; they are as yet only experiments, and will doubtless be accompanied by some drawbacks.

To airing courts I have always had many objections, and when this Asylum was opened 20 years ago, I tried the experiment of doing without them. The unfinished state of the general pleasure grounds made it absolutely necessary, however, to enclose a considerable space on each side of the House for exercise. These exercise courts, whence there was an uninterrupted view of the surrounding country, had little in common with the so-called airing courts of some of the older Asylums, which were often like big rooms, without roofs or windows. Still, they had some of the objections of the old courts, in so far that they were enclosed spaces where the patients might lie and loiter about without the active intercourse of attendants, and they have to a great extent for many years been practically disused, as, with scarcely an exception, every patient has daily (when fine) exercised in the general grounds. (See Annual Report for 1866.) On the opening of the Haddington District Asylum in 1866, the experiment of doing without any enclosed courts was tried, the number of patients being small, and the Superintendent and Medical Officer having both had previous experience here, it was carried out successfully, and that Asylum has been in operation for 12 years without any inconvenience being felt from the want of airing courts. What we are now effecting, is the removal of the airing court walls and the conversion of the whole area (11 acres) in front of the Asylum into plea ure grounds for the free use of the patients. plantation has been made along the western boundary which in time will form a complete screen from the public road. Whatever be the results in a curative point of view, it is certainly pleasanter to an onlooker to see the patients all joining in amusements in a large open park, where they can have recourse to cricket, croquet, lawn tennis, archery, football, and other outdoor sports, than to see them pacing about aimlessly in an enclosed pen.

FIRE BRIGADE.

The lamentable warnings we have had of late from conflagrations in Asylums have naturally directed attention to precautionary measures adopted against fire.

In my Annual Report for 1866 I stated that—"A Fire Brigade has been instituted, consisting of six of the attendants and artizans and a

few trustworthy patients; and at periodical drills each man is trained to some particular duty. In the event of a fire, it is arranged that each man shall immediately proceed to his post as fireman, and that he is there and then released from all responsibility of charge of the patients." In March last, after the burning of the Richmond Asylum, the Board of Lunacy issued a circular inquiring as to the precautionary measures adopted in the various Scotch Asylums against fire. As the information given to the Board may be of equal interest to the Managers, I insert a copy of my reply in this report.

PRECAUTIONS AGAINST FIRE

IN THE

MONTROSE ROYAL LUNATIC ASYLUM.

There are four fire plugs outside of the building, one in the centre of each court at the back, and two in the front of the main building. There is likewise a fire plug on each floor in the centre building.

The fire plugs have a double source of water supply—1st, from the water tank at the back of the building by pressure; and, 2nd, from a well from which the water can be pumped at a few minutes notice by day or night by a six horse-power steam engine. The supply of water being practically unlimited, any or all of the plugs can be kept in operation for any length of time. Two hundred yards of fire hose are kept ready for use in an easily accessible shed. In each back court there are 20 wooden buckets kept full of water, and on each side of the House there are 12 iron buckets kept in a convenient situation. Each group of buckets is fastened by a padlocked rope to prevent their being used for other purposes. The rope would, of course, be cut in the event of fire. Eighteen ladders of various lengths (250 feet in all) are kept at hand in back court. An Extincteur stands in the central lobby of the main building.

No lucifer matches except "safety" are allowed to be used by any officer or servant in the Institution.

Constitution and Regulations of the Fire Brigade.

Captain—Head Attendant.

No. 1—Joiner; charge of hose, assisted by Nos. 5, 6, and 3 patients.

No. 2—Plumber; to see to engines and fire plugs.

No. 3—Attendant (a slater); to see to ladders and buckets.

No. 4—Attendant, assisted by four patients.

No. 5—Attendant.

No. 6—Attendant.

The Brigade to practise and test all fire hose, plug cocks, &c., on the first Monday of each month, at two o'clock p.m.

Any defect in any part of the apparatus must be repaired at once.

In the event of a fire, the Assistant Medical Officer is to see to the safety of the inmates.

The attendants and others engaged on the Fire Brigade are relieved of all other duties for the time.

CHANGES IN STAFF.

Various changes in the staff have occurred since last annual meeting. Mr. Niddrie, the steward, has retired, after a service of 36 years, and has been succeeded in office by Mr. Mackie. Miss Brown, the Lady Superintendent of Gayfield, left to be matron of the Eastern Department of the Royal Edinburgh Asylum, and has been replaced by Miss Lumsdaine. Mrs Geddes, the housekeeper at Sunnyside, retired, and the charge of the whole female department has been intrusted to Miss Burness, an old and faithful servant of the Institution.

The new officers give promise of efficiency, and Dr Ronaldson continues to be a zealous and valued aid.

I have now to bring to a close my Twentieth Annual Report. During my superintendence of the Asylum, close on 3000 patients have been under my care, 978 have been discharged recovered, 278 more or less relieved, 492 were removed unimproved, and 765 died.

Many changes have taken place, many valued friends in the Directorate, who made their duties at this Board a prominent part of their life-work, have passed away. Within the walls of the Asylum much human suffering has been endured, and, let us hope, much has been assuaged. I am very conscious of the many infirmities and shortcomings which have marred the performance of my own duties, but I do lay claim to having been actuated by an earnest desire to promote the comfort and happiness of the inmates, and to advance the prosperity and usefulness of the Institution. On looking back I do think some material progress has been effected, and that the Asylum fulfils its function as a hospital for the insane better than it did 20 years ago.

The cares and anxieties of my office have always been sympathised in by a kind and interested House Committee, and I have to thank the members of this Board for the marked consideration and support which they have invariably accorded me.

JAMES C. HOWDEN.
